### NRS - Mechanical Bonding

NRS Technology is used for SBS Ceramic Street brake pad range. NRS Technology is based on a matrix of hooks raised on the backing plate that mold into the friction material, creating an indestructible mechanical bond between steel backing plate and friction material without use of adhesives. NRS Technology excludes completely the possibility of delamination of friction material and backing plate. SBS is the only manufacturer within the motorcycle brake pad industry, using the NRS Tecnology.

### The Power to Stop You

Scandinavian Brake Systems A/S is the world's leading manufacturer of motorcycle brake pads for street, off road and racing.

For more than 30 years our aim has always been to offer the most complete range of motorcycle brake pads in a variety of friction materials developed to suit specific purposes like street, off-road and racing – always based on our philosophy: "The highest performance of Brake System Technology can only be achieved by selecting the best friction materials".

#### DESIGNING THE POWER

SBS brake performance is the result of our continuous Research & Development. An R&D staff of dedicated engineers specialized in friction technology, in-house testing at high-tech brake dynos and race testing made by world championship winning teams on the best performing bikes ridden by world-class riders, keeps SBS at the cutting edge of brake pad technology.

#### PRODUCING THE POWER

European production located in Svendborg, Denmark. Advanced production lines using robot technology, workflows based on LEAN manufacturing philosophy, and ISO 9001:2000 guarantee a high and consistent product quality level.

#### USING THE POWER

The SBS brand is well known in the motorcycle racing world, with the company having supported numerous world championship motocross and road racing winning teams and an endless list of national title winners.

**THE SBS FAMILY**

**FRONT**

The perfect combination of fade free brake performance, brake feel and thermal stability, especially developed for sport riding and high loads from heavy motorcycles. The HS lining is rotor friendly, the performance is stable under dry as well as wet conditions and no thermal bedding-in is required.

Recommended for new generation high performance, sports, touring and custom motorcycles which are originally equipped with sinter metal brake pads. For example Honda CBR & VT, Kawasaki ZX & VN, Suzuki GSX-R & VL, Yamaha YZF & XV and Harley Davidson's.

**REAR**

Sinter metal brake lining LS for the rear brake with high thermal stability which in combination with HS for the front brake provides the necessary and expected brake performance. To avoid excessive braking of the rear wheel, the friction level of the LS lining is adjusted to match the friction characteristics of the HS lining, according to the concept of the originally equipped sinter metal brake pads.

**FRONT/REAR**

Stable brake performance for front and rear brake. High level of comfort and longlasting brake pads and rotor friendliness under various conditions such as wet roads, changing temperatures and different brake pressures. Recommended for earlier Sport, Touring and Custom models as well as daily transport and touring on small motorcycles which are mainly not originally equipped with sinter metal brake pads. Examples: Honda CN & CB, Kawasaki EN & KZ, Suzuki GN & GS, Yamaha XS & XJ and Harley Davidson's.

**FRONT**

Used to be our Top racing pad for Supersport & Superbike back in the late 90's, now it is rated as the ultimate and affordable TrackDay pad for your road & track bike.

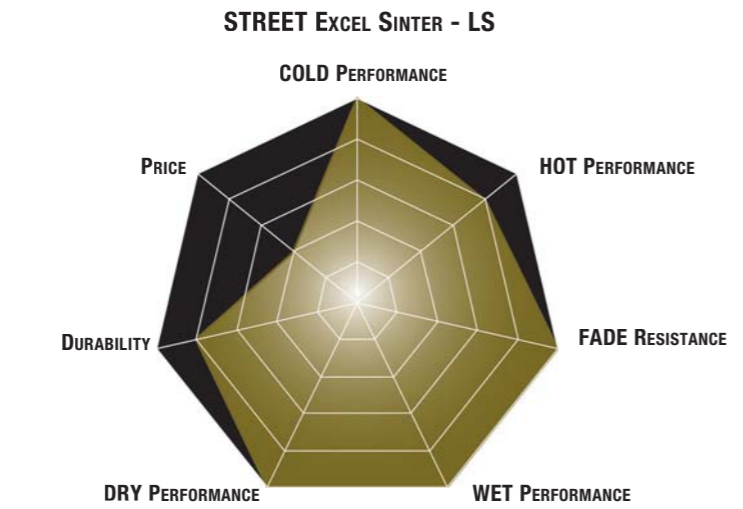

For race track only upgrades, please consult the SBS ROAD RACING flyer or www.sbs.dk.

SBS for any use/size/type of Motorcycles.
